

Picking a Web page

I chose this website because there are ways that the website could be better navigated; their current UI is too narrow and does not offer enough movement between all pages.

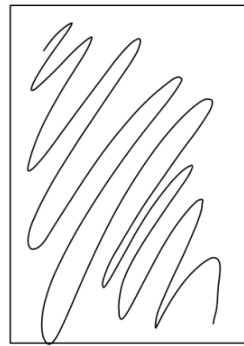

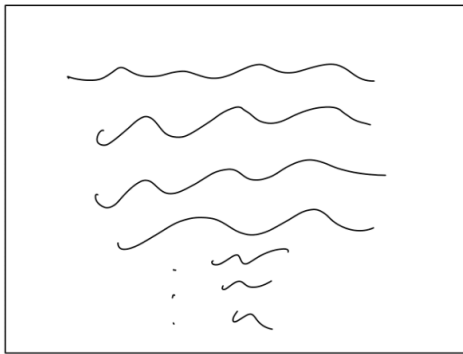

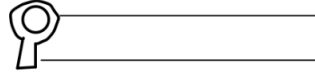

Finding Problem

- Could be better organized
- Lacking easy navigability
- Poorly placed search bar
- Mixing Fonts

Accessibility

From the wave accessibility evaluation tool there were significantly more accessibility issues than I initially thought there would have to be the missing areas where other links may be in the social media section, as well as the unlinked images that are present on the opening screen. There were also many areas that could be improved in terms of in-site navigation. For example, in the contact us section they could have made use of a drop down button to place all the social media and emails here. Instead they are kept separately and are not grouped under one place. This is just one of similar issues I have seen from this webpage.
